QuickMath will automatically answer the most common problems in algebra, equations and calculus faced by high-school and college students. The algebra section allows you to expand, factor or simplify virtually any expression you choose. It also has commands for splitting fractions into partial fractions, combining several fractions into one and ...

Step-by-Step Math Problem Solver

$12(20) - 17 = 240 - 17 = 223$. 223 is greater than 151, so this guess is too high. Therefore, x is between 10 and 20. Try $x = 15$: $12(15) - 17 = 180 - 17 = 163$. 163 is a little greater than 151, so this guess is a little too high. Try $x = 14$: $12(14) - 17 = 168 - 17 = 151$. 151 is correct, so $x = 14$.

Algebra Questions & Answers | Chegg.com

$P_1 m + q_1 n = 1$. $P_2 m - q_2 n = 1$. In order to get a unique solution we know $p_1/p_2 \neq q_1/-q_2$. Now by looking at the options, it is evident that since the value of p and q cannot be 0, so option b and c gets eliminated. Therefore option A is the correct one. Please login to submit your explanation.
