REVIEW OF DIFFERENTIATION - Instructor websites

Differential equations are described by their order, determined by the term with the highest derivatives. An equation containing only first derivatives is a first-order differential equation, an equation containing the second derivative is a second-order differential equation, and so on.

Ordinary Differential Equations 3rd Edition By Dennis G. Zill

is a second-order ordinary differential equation. In Example 1, the first and third equations in (2) are first-order ODEs, whereas in (3) the first two equations are second-order PDEs. First-order ordinary differential equations are occasionally writ-ten in differential form $M(x,y)dx + N(x,y)dy = 0$. For example, if we assume that

4.1 Preliminary Theory (nth order linear differential equations)

ential equation, or just differential equation, is another type of equation where the unknown is not a number, but a function. We call the unknown function $x(t)$ and think of it as a function of time t . Simply, a differential equation is an equation that relates the unknown function to some of its derivatives, which, of course, are not known ...

Differential Equations with Boundary Value Problems by ...

For example the existence and uniqueness theorem for first order equations, is sketched very clearly in appendix E to chapter 6, with the usual Picard fix point proof, and the linear independence of exponential solutions for differential equations, is given as an exercise.
