line statement sky telescopes mirror image moon map laminated as capably as evaluation them wherever you are now. Sky Telescopes Mirror Image Moon Map Laminated A 500mm telescope will yield a lunar image that's about 5mm across in a DSLR camera with a full-frame, 35mm-format sensor; a 1,500mm telescope will produce a 14mm image, and a 2,000mm ...

Sky Telescopes Mirror Image Moon Map Laminated

SKU# 59295. This mirror-image Moon map is perfect for the image-reversed views seen through refractor or catadioptric telescopes. Using maps drawn by renowned lunar cartographer Antonín Rukl, you'll be able to find and identify more than 1,000 features, including craters, lava flows, mountains and more. As with the original Field Map of the Moon, this map contains four quadrants, so you can spread it out to look at the entire Moon at once, or fold it to focus on individual quadrants or two ...
