## What Goes Into a Functional Specification?

A functional specification in systems engineering and software development is a document that specifies the functions that a system or component must perform. The documentation typically describes what is needed by the system user as well as requested properties of inputs and outputs. A functional specification is the more technical response to a matching requirements document, e.g. the Product Requirements Document "PRD". Thus it picks up the results of the requirements

analysis stage. On more

## **Functional specification - Wikipedia**

Gather their feedback and ask them to be a reviewer for your technical spec. Finally, it's time to actually write the spec. Block off time in your calendar to write the first draft of the technical spec. Use a collaborative document editor that your whole team has access to. Get a technical spec template (see below) and write a rough draft.
